

Product Datasheet

Overview: Controls

for Motor Series MODULARline and SOLIDline

Motors with intelligent controls for each application

GEIGER offers for every application in the sun protection area the appropriate motor intelligence. Different control concepts meet the requirements of ...

- ... the industry: efficient programming processes and low complaint ratios.
- ... the trades: easy installation and adjustment.
- ... the user: convenience and operational reliability.

Standardized motors with intelligent controls

Take advantage of the sophisticated series of motors with intelligent controls for all construction or renovation projects.

Customized motors with intelligent controls

The optimized manufacturing processes used by rolling shutters and awning manufacturers make it necessary to have customized controls. GEIGER meets the requirements of its customers by providing individualized controls that fit easily into existing production processes.

GEIGER Training Center + Service Hotline

Our GEIGER designing engineers always make sure to develop easy manufacturing and assembling processes. In this context we also offer comprehensive customer training programs at our brand new training center. Our customer service team and our technical support department are happy to assist you. If you would like to contact them, please ring our hotline. Our specialists will provide customer support wherever and whenever needed.

Made by GEIGER

GEIGER relies on Germany as production location: the GEIGER motors are developed and produced in Germany. This situation allows an optimal combination of R & D, manufacturing processes and quality management. Our clients benefit from:

- **▶** Low noise motors
- ► Low energy consumption, a big plus factor today
- Low heating of the engine which means a longer period of time for adjustment purposes
- ► High quality radio system

This overview enables the user to:

- select the optimal motor controls combination for the desired application.
- view all the features of the selected control together with an explanation of the terms used.
- compare the on-site conditions with the features required for the application of the various motor controls.

Antifreeze protection

The situation «hanging frozen to the window sill», is recognized by the system and the hanging will not be damaged.

GEIGER locking power reduction

 This electronic device detects the optimum closing force to be applied in order to close the cassette with a minimal force.

GEIGER Powertronic

 The GEIGER-Powertronic enables the user to change the motor's closing characteristics.
 The user can raise or reduce the closing power applied through the motor.
 This way, he or she influences the closing characteristics of the casing. A rise in the closing power causes a tighter closing of the casing with increased stress on the fabric; a reduction in the closing power causes a looser closing and less strain to the fabric.

GEIGER-Soft Position

 The hanging will stop before reaching the end positions.

GEIGER synchronous position

 The Geiger motor intelligence ensures that when rolling shutters of different sizes are mounted next to the other, the bottom laths are positioned on the same level. This is a really nice visual upgrade for the house facade.

GEIGER-Operating Radius Identification

Modern electronic control identifies the equipment's torque curve, and makes available to the motor the exact amount of power needed during operation, and while closing.

Hanging Length Adjustment

 Modifications in hanging lengths are recognised and compensated for.

Hanging protection

- antifreeze protection
- GEIGER locking power reduction (automatic function)
- GEIGER Powertronic (manual function: power levels)
- GEIGER soft position (the hanging stops before reaching the end positions)

Obstacle detection in UP direction

Protection of the system during retraction.

Blocking detection in DOWN direction

 Prevents the winding of the hanging inside the box.

Burglary resistance

A torque shutoff is effected after each cycle in the lower end position. This makes it fairly difficult to lift up the curtain.

Commissioning via Plug & Play

 Only one run to the upper end position and to the lower end position is sufficient.
 Done! Plug & Play!

■ Technical data and dimensions

Specifications series MODULARline (GR45)

²⁾ The average sound pressure level data are intended for guidance only. The values were determined by GEIGER at a distance of 1 m, with a hanging motor at idle speed and averaged over 10 seconds. There is no reference to any specific test standard.

³⁾ GU4550 is only available with motor head KS and SOC and CE-certification.
